

AN-307 Repairing Damaged Databases

In Brief

Elite Reporter uses, manages and maintains a large number of databases. It is actually a very powerful program.

However, if you have a power failure, computer malfunction or switch off in the middle of some operations you can damage your databases quite easily.

In Depth

Exit all other programs.

Start the "Table Repair" program.

At the top on the left, select the "Elite ID" alias.

To the top on the right, select each database in turn and then press the "Rebuild" option.

In other words, rebuild each and every database. If you have a problem with one database then you should rebuild them all. The good news is that this program is very fast and will only take a few minutes to do many databases.
